## Saturday Demo - February 2016. Michael Fay makes a Bowl 'emerging' from Rectangular Block

Everyone who is familiar with the consummate skill of Michael at the lathe, knew this was going to be an opportunity to witness turning at master-class level. And so it was.

The blank, a block of sycamore 120mm cubed, is tenon-held in the chuck. "Always check for tightness. Blanks can and do move." Michael emphasises the need for high RPM for the first operation. This consists in turning a spigot 45mm deep by 90mm dia. He is using a fairly heavy bowl gouge, with the tailstock for support. Precision is a key concept when Michael is turning, and he completes the spigot with some feather-light use of the parting tool. He will form a half sphere from this spigot. The depth gauge is set at 75mm to register the point from which the curve will commence. The tailstock is removed. A precise mathematical formula is used to achieve an accurate semi-spherical profile. He

applies two pencil marks registered from the edge of the spigot; One around the circumference (45mmx0.11=9.9mm), the other around the face of the spigot (90mmx0.29=26.1mm). He now turns the area between these two points in a straight line. This principle is repeated until he has created a series of facets, presenting a pre-spherical profile. The blending of these angles into a perfect half sphere is where "The formula goes out the window". The lightest of light scraping actions is applied, punctuated with repeated checking for perfect sphericality, using a custom-made template.

At this point, with the integral half sphere fully formed, Michael would bring the piece to the band-saw to be cut into two identical units, each with a quarter sphere protruding from the rectangular block. That is, the 'dome' side of the

piece, being offered to the saw blade, the cut proceeds exactly along the centre line. I say 'would' above because Michael took the precaution of pre-cutting the blank and reconstituting it with a paper joint (for which he

recommends brown paper), which he now separates. He explains that he would trim 10mm off the block-section of either piece to enhance the sense of proportion between the two elements, bowl and block. To avoid the risk of depending on freshly applied hot melt glue and the dangers involved in spinning an unbalanced piece, he produces a piece he had prepared earlier, which is at precisely the current stage of the demo. This piece is well braced and balanced with waste-wood pieces and a generous supply of hot melt glue! Speaking of which, a very useful tip for releasing the hot melt hold; "Hot melt glue and methylated spirits stand in opposition to each other!"

The piece is mounted on a custom-made set-up of plywood pieces so as to afford an excellent compression-hold in the chuck, including a sturdy faceplate to which the item is spot-glued. The faceplate section needs to be trued up either dead flat or with a slight concave, but definitely not a convex surface! The centre of the bowl is marked, and a dividers-leg placed on this point, with the other leg reaching out to the right and then left shoulders of the block. The

centrality of bowl-to-block is key to the 'feel' of the finished piece. Two concentric circles are pencilled-in denoting the rim. Michael urges use of a marking knife rather than a pencil for marking straight lines; "A pencil line will throw you off". Before he begins hollowing, the area outside and up to the bowl rim is refined and brought down about 3mm so that the full circle of the rim stands slightly proud of the block surface, giving dramatic significance to the concept 'emerging.' With regard to the hollowing process, Michael acknowledges "This is a bit of a lotto now. You need to keep checking...and checking...and checking. A slip at this stage would be catastrophic!"

Well, there was no slip. Hollowing was performed to the exacting standard which characterises every piece of this master-turner's work. Thank you Michael for a wonderful demonstration. You make us proud!

#### Pacelli O'Rourke

#### Chapter Challenge - 2016

There was great response to last month's call to make a chess pawn. The winner was Dicey Reilly with Martin Boyle and Ronnie Butler also taking prizes.

Joe O'Neill is holding 8 pawns from the competition and is hoping to select a team to make the full set shortly. He has the wood ready and waiting to go!

Any ideas --> what this is? Explanation - Page 7.

#### **Donations presented to Alzheimer's Society**

At the Februaruy meeting, funds collected over the last while were presented to the Mary Hickey from the Rose Cottage daycare residence and drop-in centre. Mary is pictured right with one of her clients.

The Society has been supported by the Chapter for the past five years, and over €300 was presented to Mary representing

funds raised from sales at the last Tallaght Library Exhibition. Cecil Barron has also supported the Society for many years and at the meeting presented Mary with over €1000 raised from the sale of his work.

Tony Lally also donated in excess of €300 from the sale of items.

#### Olympic Peninsula Woodturners.

Our Secretary, Joe O'Neill, has recently been in contact with an organisation of woodturners in Washington State, USA. The Olympic Peninsula Woodturners are based in Silverdale, west of Seattle.

If you are out that way, give them a call or take a look at their website at OPCAAW.com (there is a link on the Useful Links page of our website). Mike.

#### For Sale – A Wivamac Lathe, many accessories, and wood.

Wivamac DB1000V-CB. A professional lathe whose specifications can be found at www.toolpost.co.uk. The lathe comes with a bowl turning attachment leg; a Vicmark chuck with jaw sets; faceplates; and live and fixed centres.

Also available - a very comprehensive tool collection. Tools including the Hamlet long boring bar; drill jigs; a wet sharpening grinder; and various gouges and scrapers. All equipment is in first class condition.

There is also a selection of assorted bowl blanks that can be added to the sale at no charge.

Also available to be added to the sale at no charge are two planks. Approx 5 ft x 2ft x 4" thick, one is English elm, the other is English Yew (would make good bowl blanks).

Any reasonable offer will be accepted.

Contact Jeff Swinbank at 087-6193098 or carrowardfarm@gmail.com. Jeff is near Strokestown, Roscommon.

#### The Processionary Caterpillar.

The pine processionary (Thaumetopoea pityocampa) is a moth of the family Thaumetopoeidae. It lives for a day and lays several hundred eggs; mostly in pine trees. When they hatch in early Spring, the species is notable for the behaviour of its caterpillars, which overwinter in tent-like nests, and then process through the woods in nose-to-tail columns when they are ready to pupate in the early Spring. This is what you see in the picture on the earlier page. One caterpillar leads the procession to a suitable hole in the earth from where the moths will eventually emerge.

It is one of the most destructive species to pines and cedars in Central Asia, North Africa and the countries of southern Europe. The caterpillars go out each night and eat the pine needles of the host tree.

The urticating hairs of the caterpillar larvae cause harmful reactions in humans and other mammals. The larvae can eject hairs when threatened or stressed; the hairs, which have the form of harpoons, then penetrate and irritate all areas of exposed skin nearby with an urticating protein. Allergic reactions may follow in susceptible individuals on subsequent exposure to the hairs.

The caterpillar larvae should never be handled and pets (dogs) should be kept away from them, as ingestion will cause an extreme reaction, if not death.

The pine processionary - I came across them when walking in Spain recently. An unusual insect that can be very unpleasant.

Mike Sims

#### **Trade Stands for 2016**

The following suppliers have agreed to attend the Saturday meetings as follows:

Apr. The woodshed

May. The Carpentry Store and The Hut.

Jun. The Carpentry Store

Jul. The Hut

Aug. The Woodshed

Sept The Carpentry Store

Oct. The Hut

Nov. The Woodshed

Dec. The Hut

Jan. The Woodshed

If there are any changes, we will let you know as soon as possible.
